

Ahead in Rack Power

Ratio
ELECTRIC

A man in a blue jacket stands with his arms crossed in a server room aisle, flanked by rows of server racks. The scene is lit with blue light, creating a high-tech atmosphere.

**DEDICATED SOLUTIONS
FOR POWER DISTRIBUTION
AND MONITORING
IN DATA CENTERS**

Ratio
ELECTRIC

Ratio Electric develops, produces and sells electrical power connection and distribution systems. Our company is based in Holland and active throughout Europe. During half a century we gathered a huge amount of experience that is used to meet the latest demands in our markets. Doing so we built up a tradition in innovation with state of the art, reliable and affordable products. These products are delivered to OEM's or distributed by specialized wholesale companies, covering the following areas:

Industry and Office

We are an industry leading supplier of power cords, cord sets, power strips, power plugs, power connectors and other components. On request we also develop custom made power connections with required approvals.

E-Mobility

Ratio Electric provides high quality AC connection and charging systems for electric and plug-in hybrid electric vehicles. All these products, like charge stations, cables and components comply with the latest European standards.

Marine

Our Shore Power connection system is the marine standard all over Europe. The MP16/32 boat inlets and cables are stylish and safe. Every marine product is practically designed and able to withstand the rigors of life at sea.

ICT

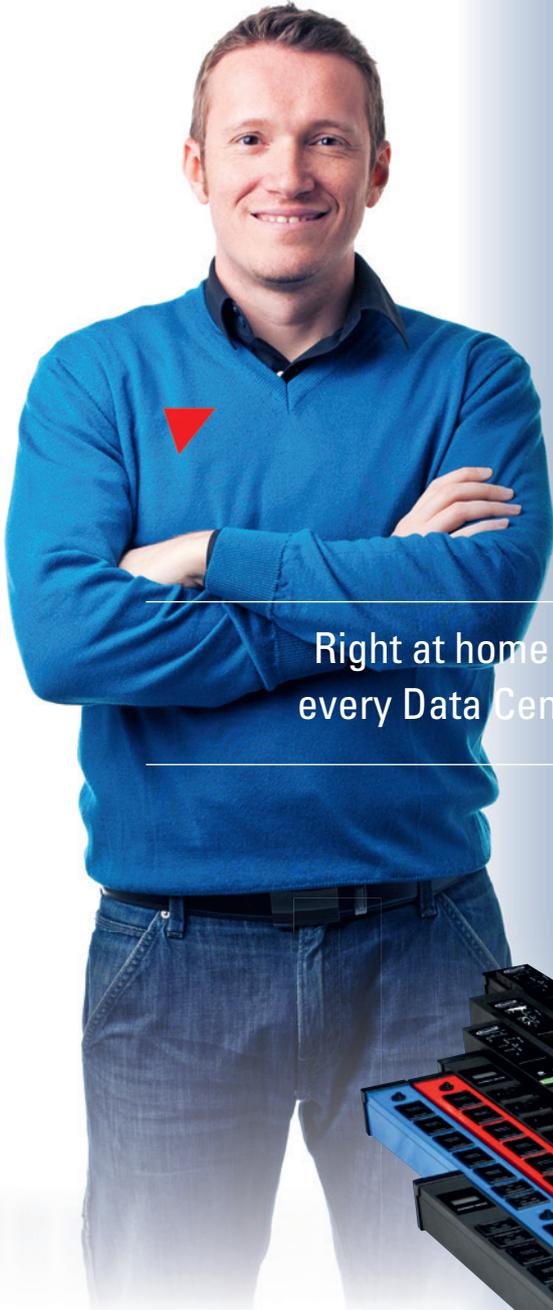

We are well up in Data centers. Ratio Electric modular solutions for power distribution and power management in 19" racks can be found all over Europe. Our complete range of Power Distribution Units (PDU's) and power cords will normally suit your needs. When required we also produce custom made specific versions in small quantities.

We put all our energy
in building durable products that
enable you to save energy

Ratio
ELECTRIC

With a growing use of cloud services and a vast increase in big data the amount of data centers is growing explosively. Rely on Ratio Electric. IT Power Distribution with experience.

Right at home in
every Data Center

Information Technology plays an increasingly important and critical role for all sorts of commercial and non-profit organisations. A large amount of IT-services are offered online. This requires a higher performance demand for availability and continuity. While not only the market for Datacenters is growing fast, the technology used in the Data centers is also developing accordingly. Cooling in particular requires a lot of electrical power. Measuring and controlling this power on rack (and even on server) level is required.

With the new Powertek series Ratio Electric will allow Datacenters to fully manage rack power and reduce energy.

Proven products

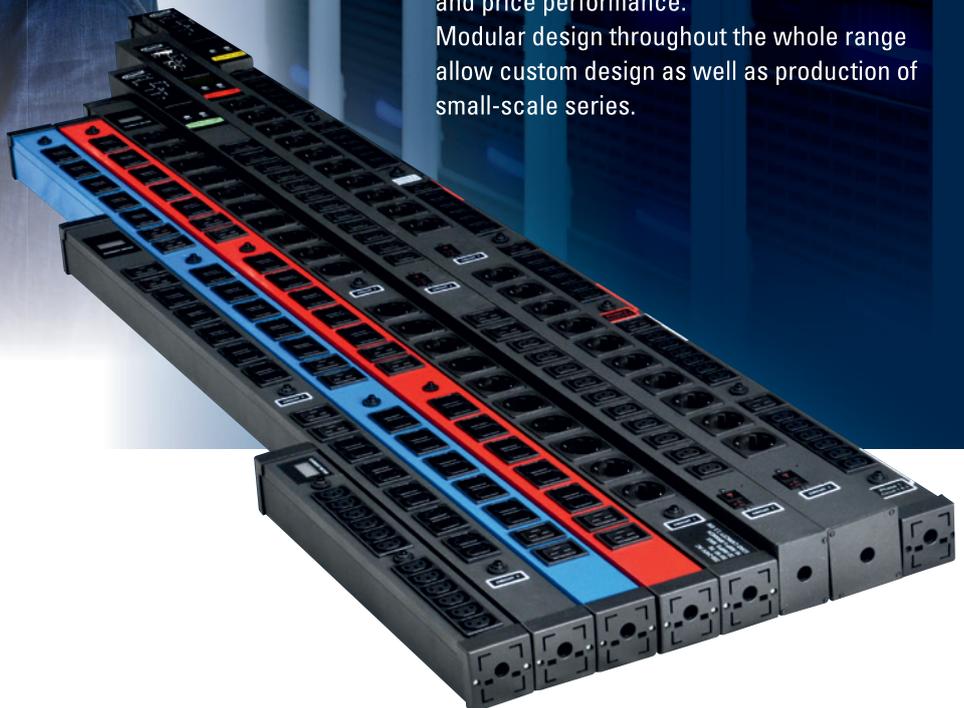

Over 20 years of experience in development, design, production and sales of power distribution for the IT market.

We supply dedicated solutions for Power distribution in Data centers.

From basic outlet strips to IP controlled Powertek series

All our products guarantee an optimal quality and price performance.

Modular design throughout the whole range allow custom design as well as production of small-scale series.

Ratio Electric PDU's (Power Distribution units) are power strips or housings for use in data racks. PDU's can be configured in both 16A and 32A, in single phase and three phase systems. The PDU's can be mounted both horizontally (19") in 1U or 2U height or vertically (0U). PDU's can be without any meter or control function (basic PDU). Local metered or remotely and local monitored and managed (Powertek series).

Housing:

For the Basic series we use an aluminium extrusion housing, grey or black anodised. The vertical Pro series and Powertek housings are produced with extra strong aluminium extrusion. Standard black coloured. All horizontal series are manufactured in a black powder coated steel. Other coloured PDU casings upon request.

Outlets:

C13, C13 Lock, C19, C19 Lock, Schuko, UTE (Pin-Earth), Denmark, UK, GST.

Overload protection:

Circuit breakers are used to split each 32A Phase in two groups of 16A. For economic protection thermal fuses can be used. For high-end protection the magnetic-hydraulic breakers are the best option.

Input Power cords:

All types from country specific plugs like Schuko to IEC60309 industrial plugs are available as input source. Halogen free, flame retardant and low smoke cable on request.

Mounting:

Vertical and horizontal rack mount form factors are available to suit the physical rack mount environmental in cabinets.

PDU PRODUCT RANGE

	Circuit breakers	Local inlet Power monitoring	Remote inlet Power monitoring	Outlet Power monitoring	Outlet Switching	Environmental monitoring	Setup, alarms, acces, security

PDU Selection

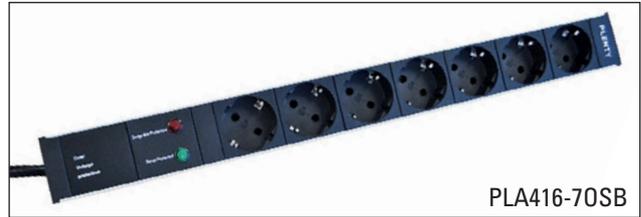

Ratio Electric PDUs increase the availability, efficiency and manageability of equipment in Data centers and other high-density IT environments. A wide selection of vertical (0U) and horizontal (1U, 2U or 3U) models are available, divided into categories shown in table above.

Ratio Electric increases the efficiency of your Data Center equipment

Basic PDU's provide an easy solution where reliable power distribution for equipment racks and other data center applications is required. These PDU's can provide both power distribution and circuit protection.

The metered PDU's with local input current meter allow network engineers to utilize the PDU's True RMS power monitor to precisely measure the current (in A) that the IT devices are drawing from the power circuit. When new servers and devices are added, the impact on the cumulative power consumption can be observed immediately. Thus allowing the engineer to load each circuit to its maximum capacity without the danger of overloading causing possible failure.

PLA416-9PM

Ratio ELECTRIC

Powertek PDU's offers real-time remote power monitoring of current (amps), voltage power (kVA, kW) and energy consumption (kWh) with a high grade of accuracy that enables you to track, trend, analyse and utilise all your available power. Powertek PDU's also allow you to remotely switch outlets separately for control and remote reboot. This enables you to have full control over your data rack. Power monitoring and switching can be combined.

IP ACCESS AND TECHNOLOGY
Support HTTP/HTML, SNMP V1,2,3, IPV4&6, DHCP, Modbus Over IP, Telnet.

VERSATILE CONNECTION PORTS
10-100 Mbps Ethernet (RJ-45).
Environmental RJ45 port mini USB for firmware update and debug.
Daisy chain RJ45 IN/OUT.

LIGHT ALUMINIUM CHASSIS
Light and excellent heat dissipation.
Large variety of profile colours available.
Versatile mounting options to fit major Server Rack manufacturers.

SMART LCD DISPLAY
Shows Input power parameters.
Scroll individual outlet (V, A, PF, W, KWxH).
Screen turn orientation according PDU position.

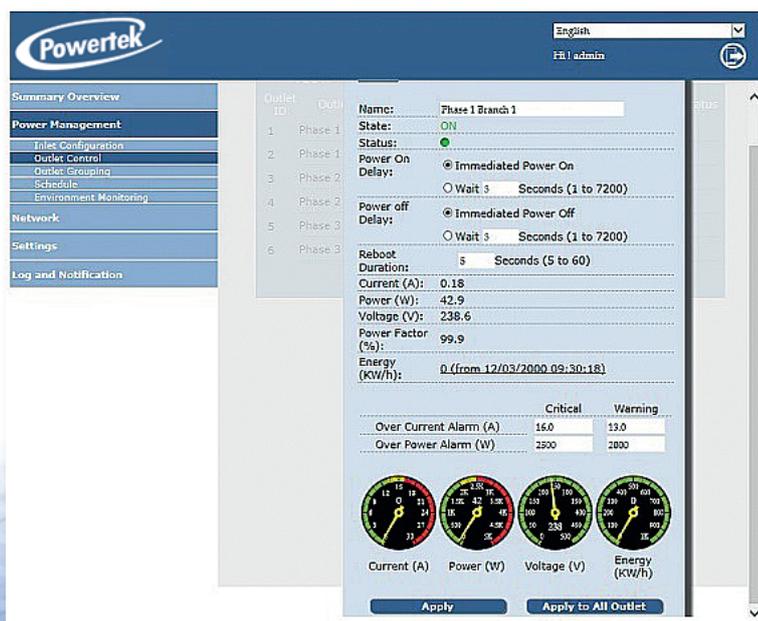

DAISY CHAIN
The Daisy Chain to monitor and manage up to 4 PDUs with a single IP address.

ENVIRONMENTAL SENSORS
All in one temperature and humidity sensor.
Supports 2 digital inputs for door open sensor, water leakage, smoke sensor, air flow and vibration sensor.

HIGH QUALITY ELECTRICAL COMPONENTS
Wide range of power sockets including Schuko CEE 7/4UTE CEE7/5, UK BS1363, AS/NZS3112, SEVT13, SEVT23, C13 lock, C19 lock. UL and VDE approved sockets. Bussbar copper connections, prevent hot points across the entire electrical line.

BRANCH CIRCUITS
Meets last branch protection standards.
VDE approved for European use.
Premium magnetic hydraulic breaker.

PDU's help to ensure you have sufficient power at the right location. Choose from:

SMART PIM

(per inlet monitoring PDU's)

SMART POM

(per outlet monitoring PDU's)

SMART POMS

(per outlet monitored and switched PDU's).

Powertek Power management solutions enable data center and facility managers to:

- Efficiently manage power resources
- Improve uptime and staff productivity
- Optimize capacity planning decisions
- Energy saving.

Ratio

ELECTRIC

The SMART PIM PDU range provides highly reliable power distribution with the latest intelligent power monitoring.

It offers both a clear local LCD display and IP monitoring of the total overall power and cabinet environmental conditions. Its intuitive interface allows you to monitor Amps, Volts, Watts, power factor, kWh, temperature and humidity levels via any web browser. Or receive alarms and alerts via SNMP or e-mail when conditions exceed their pre-set thresholds.

AUTOMATIC TRANSFER SWITCH (ATS)

The ATS provides redundant power for single-corded network devices. Dual input cords supply both primary and secondary power. In case the primary power source becomes unstable or fails at all the ATS will automatically switch to the secondary power source until the primary input is restored and stabilized. The ATS will only support power sources that are in phase.
